

About Me

Computer Science undergraduate with a strong focus on C++ and problem-solving through competitive programming, regularly practicing algorithmic challenges to strengthen analytical thinking, logical reasoning, and core computer science fundamentals such as data structures and algorithms. This continuous exposure to problem-solving under constraints has improved the ability to break down complex problems and implement efficient, optimized solutions. Alongside this, currently exploring machine learning through hands-on projects, gaining practical experience with data preprocessing, model training, and evaluation, with a growing interest in applying machine learning techniques to real-world, data-driven software problems.

Key Projects	
DAM (Jan '26)	
Objective	• Build a lightweight deep learning framework from scratch to master neural network fundamentals
Approach	• Implemented modular neural network components using Python and NumPy • Built forward and backward propagation with fully vectorized operations
Result	• Successfully trained stable neural networks end-to-end without using external deep learning frameworks
Face Recognition System (Dec '25 – Jan '26)	
Objective	• Build an automated face recognition system for reliable identity verification
Approach	• Implemented face detection and feature extraction using deep learning models • Applied preprocessing and augmentation to improve recognition robustness
Result	• Achieved accurate face identification on unseen images with consistent performance
Space Shooter (Jul '25)	
Objective	• Develop a 3D arcade-style space shooter demonstrating core game development fundamentals
Approach	• Built player movement, shooting mechanics, and enemy AI using Unity and C# • Implemented collision handling, particle effects, and gameplay feedback systems • Designed modular scripts to support scalable gameplay and future feature expansion
Result	• Designed modular scripts to support scalable gameplay and future feature expansion

Technical Skills

- **Programming Languages:** C++, C, Python , SQL, MATLAB, Java, HTML, CSS, Tailwind CSS, REST APIs , JavaScript, MERN Stack
- **Tools/Software/Utilities:** MS Excel, Jupyter Notebook, Git, GitHub, OpenCV

Competitive Programming

- Regularly practice algorithmic problem-solving with a focus on **data structures, algorithms, and optimization**.
- Solved **250+** problems across competitive programming platforms.
- **Codeforces:** Max Rating **1133**.

Achievements

- Winner, Hackathon –IILM University,Greater Noida(Feb' 25)
- Second Runner UP , Hackathon at Tulas institute , Dehradun(Sept' 25)

Position of Responsibility

Senior Position, NCC(Jul' 24-Present)

- Demonstrated leadership, discipline, and teamwork

Extra-Curricular Activities

- roleContributed to college-level technical events, hackathons, and coding competitions
- Participated in inter-university hackathons, technical fests, and innovation challenges.
- Completed technical certifications to strengthen foundational and applied knowledge.

Education

- B.Tech., Sharda University
- Class XII, [Central Hindu Girls School]
- Class X, [Central Hindu Girls School]

8.6/10.0 CGPA

1st Division

1st Division

(2024 - Present)

(2023)

(2021)
